

**Use of block copolymers bearing phosphate and/or  
phosphonate functions as adhesion promoters or as  
protecting agents against the corrosion of a metallic  
surface**

5

**Abstract of the Disclosure**

The invention relates to the use of a block copolymer  
having at least one block that comprises phosphate  
10 and/or phosphonate functions, as an additive for film-  
forming compositions, such as paint, latex or mastic  
which is optionally siliconised in order to ensure or  
promote the adhesion of the aforementioned compositions  
on a metallic surface or to protect said metallic  
15 surface against corrosion. The invention also relates  
to film-forming compositions comprising the above-  
mentioned block copolymers.
